DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on February 4, 2008 has been entered.

Reasons for Allowance

Claims 3 and 10 are canceled.

Claims 1, 2, 4-9 and 11-14 are allowed.

This is examiner's statement of reasons for allowance.

Claims 1, 2, 5-9 and 12-14 are allowed over the prior art of record because the prior art does not disclose an imaging optical system comprising "...wherein an optical path of a light beam passing through a center of the diaphragm and a center of the image plane is deflected by the off-axial reflection surfaces within a surface perpendicular to the long side direction of the region to undergo crossing at least once wherein all of the off-axial reflection surfaces satisfy a conditional expression:

|P|S 0.5

where $P \text{ (mm}^{-1}\text{)}$ represents an optical power of the off-axial reflection surface within the surface perpendicular to the long side direction and $S \text{ (mm)}$ represents a distance from the off-axial reflection surface to a subsequent one of the off-axial reflection surfaces along a reference axis.”

Claims 4 and 11 are allowed over the prior art of record because the prior art does not disclose an imaging optical system comprising “a first set of a plurality of off-axial reflection surfaces arranged on the object surface side from the diaphragm; and a second set of a plurality of off-axial reflection surfaces arranged on the image plane side from the diaphragm, wherein an optical path of a light beam passing through a center of said diaphragm and a center of the image plane is deflected by the off-axial reflection surfaces within a surface perpendicular to the long side direction of the region to undergo crossing at least once, and, wherein the number (X) of off-axial reflection surfaces included in the first set of the plurality of off-axial reflection surfaces and the number (Y) of off-axial reflection surfaces included in the second set of the plurality of off-axial reflection surfaces satisfy a relation:

$$0.65 < X/Y < 1.6.”$$

The features identified, in combination with other claim limitations, are neither suggested nor discussed by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
